Learning Skills Check-Up

Student Name:	Grade:
School Name:	Division:

Learning Ease Score

/ 100

Green	Learning looks mostly smooth
Amber	Some support can help
Red	High-priority signs seen

Higher score = smoother day-to-day learning readiness

Your Learning Skills Snapshot A quick view of the 8 learning areas.

Learning Skills	Support Status
1) Thinking & Problem Solving	
2) Attention & Self-Regulation	
3) Working Memory	
4) Planning Skills (Executive Functions)	
5) Posture & Body Management	
6) Locomotor and Movement Fluency	
7) Coordination & Bilateral Integration	
8) Object Control and Visual Tracking

Learning Skills Check-Up

If not well developed you may notice:

1) Thinking & Problem Solving

At home - Parents often notice: child giving up quickly, needing help immediately, not trying new ways.

In school - It can affect tasks like: puzzles, matching, building blocks, simple do-it-yourself tasks.

In the classroom - It may look like: child avoiding new activities, needing constant adult help, low confidence in learning games.

2) Attention & Self-Regulation

At home - Parents often notice: child cannot stay with one activity, needs repeated calling, big meltdowns, difficulty waiting turn.

In school - It can affect tasks like: circle time, listening to stories, following teacher directions, sharing.

In the classroom - It may look like: child missing instructions, frequent reminders, difficulty settling, behaviour complaints.

3) Working Memory

At home - Parents often notice: child forgets 2-step instructions, forgets mid-task, needs immediate repetition.

In school - It can affect tasks like: take your bottle and sit, pack up and line up, action songs.

In the classroom - It may look like: child not completing tasks, confusion in routines, slower learning of rhymes and sequences.

Learning Skills Check-Up

If not well developed you may notice:

4) Planning Skills (Executive Functions)

At home - Parents often notice: child does not start without help, leaves tasks unfinished, misplaces items, struggles with routines.

In school - It can affect tasks like: completing a craft, cleaning up, following daily routines.

In the classroom - It may look like: child leaves unfinished work, messy belongings, difficulty transitioning between activities.

5) Posture & Body Management

At home - Parents often notice: child slouching, hand tired quickly, cannot sit steady, clumsy indoors.

In school - It can affect tasks like: colouring, drawing, pre-writing strokes, sitting for story time.

In the classroom - It may look like: child has low table-work stamina, messy/slow pre-writing, constant shifting on the chair.

6) Locomotor and Movement Fluency

At home - Parents often notice: child avoids running/jumping, struggles with hopping/balance, tires quickly, falls often.

In school - In preschool, it can affect tasks like: playground participation, group games, confidence in movement.

In the classroom - It may look like: child avoiding PE/play, low confidence, difficulty with movement-based learning games.

If not well developed you may notice:

7) Coordination & Bilateral Integration

At home - Parents often notice: child struggles using two hands together, difficulty with buttons/zips/shoes, frustration in fine tasks.

In school - It can affect tasks like: scissors, tearing/pasting, beads, opening lunch boxes, dressing independence.

In the classroom - It may look like: child has slow craft work, difficulty managing materials, reduced independence.

8) Object Control and Visual Tracking

At home - Parents often notice: child having poor catching/throwing/aiming, spills, difficulty tracking books/pictures/lines.

In school - It can affect: activities like ball play, pouring, stacking/placing tasks, early book handling and visual tracking.

In the classroom - It may look like: child having difficulty copying simple shapes, messy colouring within space, reduced readiness for reading/writing later.
