Learning Skills Check-Up

Student Name: **Ankita Vyas**	Grade: Grade 3
School Name: Sunbeam Suncity School, Varanasi	Division: C

Learning Ease Score

63 / 100

Higher score = smoother day-to-day learning readiness

- Learning Well
- Learning With Support
- Needs More Support

Your Learning Skills Snapshot (8 Areas)

A quick view of 8 everyday readiness areas based on your home observations.

Learning Skills	Support Status
1) Thinking & Problem Solving	Needs More Support
2) Attention & Self-Regulation	Learning Well
3) Working Memory	Learning With Support
4) Planning & Organisation	Learning With Support
5) Posture & Body Management Skills	Learning Well
6) Locomotor and Movement Fluency	Needs More Support
7) Coordination & Bilateral Integration	Learning With Support
8) Object Control & Visual Tracking	Learning Well

Learning Skills Check-Up

Learning Skills - Detailed Explanations

Each skill below describes abilities that are **actively developing during the primary school years.** These skills influence how children manage classroom learning, homework, and daily routines. Development is gradual, and children may need different levels of support at different ages.

1) Thinking & Problem Solving

What this skill means at primary age
This skill reflects how a child approaches challenges, tries different strategies, and works through problems during learning activities.

You may notice
- Child gives up quickly when work feels difficult
- Prefers immediate help rather than trying another way
- Struggles to apply known methods to new problems

Why this matters
Thinking and problem-solving skills support learning across subjects, especially when tasks become more complex and less familiar.

How it is best supported
- Encouraging children to explain their thinking
- Allowing time to attempt solutions before helping
- Praising effort and strategy use, not just correct answers

2) Attention & Self-Regulation

What this skill means at primary age
This skill reflects how well a child can stay focused, manage impulses, and regulate emotions during classroom and learning activities.

You may notice
- Difficulty staying focused during classwork or homework
- Frequent distraction by surroundings or peers
- Emotional reactions when corrected, rushed, or challenged

Why this matters
As academic demands increase, children are expected to sustain attention for longer periods and manage their behaviour with less adult prompting.

How it is best supported
- Clear routines and expectations
- Breaking work into smaller chunks
- Movement breaks and calm reminders

3) Working Memory

What this skill means at primary age
This skill reflects how a child holds and uses information in mind while completing a task.

You may notice
- Difficulty following multi-step instructions
- Forgetting what to do next during a task
- Trouble keeping track of information while reading, writing, or solving maths problems

Why this matters
Working memory supports mental maths, reading comprehension, written expression, and following classroom instructions.

How it is best supported
- Giving instructions in steps
- Encouraging note-taking or visual reminders
- Repeating and rephrasing information when needed

4) Planning & Organisation

What this skill means at primary age
This skill reflects how a child plans tasks, manages materials, and organises time and belongings.

You may notice
- Difficulty starting tasks independently
- Leaving work incomplete or rushing through it
- Misplacing books, notebooks, or homework

Why this matters
Planning and organisation become increasingly important as children manage multiple subjects, assignments, and expectations.

How it is best supported
- Clear instructions and task timelines
- Checklists or visual planners
- Adult guidance to break tasks into steps

5) Posture & Body Management Skill

What this skill means at primary age
This skill reflects how well a child maintains body posture and comfort during seated classroom activities.

You may notice
- Slouching or frequent shifting while seated
- Fatigue during writing or desk work
- Complaints of discomfort during longer tasks

Why this matters
Good posture and body control support handwriting endurance, attention, and overall classroom participation.

How it is best supported
- Regular movement between seated tasks
- Proper seating and desk height
- Activities that strengthen core and postural muscles

6) Locomotor and Movement Fluency

What this skill means at primary age
This skill reflects how confidently and smoothly a child moves during physical activities and play.

You may notice
- Avoidance of sports or physical games
- Awkward or hesitant movement patterns
- Low stamina during PE or outdoor play

Why this matters
Movement confidence supports physical health, social participation, and overall alertness for learning.

How it is best supported
- Encouraging regular physical activity
- Non-competitive movement opportunities
- Gradual exposure to varied movement experiences

7) Coordination & Bilateral Integration

What this skill means at primary age
This skill reflects how well a child uses both sides of the body together in coordinated tasks.

You may notice
- Slow or effortful handwriting
- Difficulty managing classroom tools (ruler, scissors, geometry instruments)
- Reduced speed or independence in written work

Why this matters
Bilateral coordination supports efficient writing, tool use, and overall classroom independence.

How it is best supported
- Hands-on activities that use both hands together
- Fine-motor games and craft tasks
- Allowing adequate time for written work

8) Object Control & Visual Tracking

What this skill means at primary age
This skill reflects how well a child coordinates vision with hand and body movements.

You may notice
- Difficulty copying from the board
- Losing place while reading
- Challenges with ball games or aiming tasks

Why this matters
Visual tracking and object control support reading fluency, copying accuracy, and participation in sports and classroom activities.

How it is best supported
- Activities that involve tracking, aiming, and catching
- Reducing visual clutter during work
- Encouraging regular breaks during visually demanding tasks
