Learning Skills Check-Up

Student Name: **Anshul Sharma**	Grade: UKG
School Name: Sunbeam Suncity School, Varanasi	Division: C

Learning Ease Score

58 / 100

Green	Learning looks mostly smooth
Amber	Some support can help
Red	High-priority signs seen

Higher score = smoother day-to-day learning readiness

Your Learning Skills Snapshot

A quick view of the 8 learning areas.

Learning Skills	Support Status
1) Thinking & Problem Solving	Doing Well
2) Attention & Self-Regulation	Still Developing
3) Working Memory	Still Developing
4) Planning Skills (Executive Functions)	Doing Well
5) Posture & Body Management	Requires Support
6) Locomotor and Movement Fluency	Still Developing
7) Coordination & Bilateral Integration	Requires Support
8) Object Control and Visual Tracking	Doing Well

Learning Skills Check-Up

Learning Skills - Detailed Explanations

Each skill below describes how children typically develop during the preschool years. These abilities are **emerging skills** that are supported through daily routines, play, and adult guidance.

1) Thinking & Problem Solving

What this skill means at preschool age

This skill reflects how a child approaches new or slightly challenging activities during play and daily tasks.

You may notice

- Child prefers familiar ways of doing things
- May seek adult help quickly when something feels difficult
- Enjoys trying again when encouraged in a playful, relaxed way

Why this matters

In the preschool years, children are still learning how to explore and experiment. Confidence and persistence grow gradually through repeated, positive experiences.

How it is best supported

- Let your child try before stepping in
- Praise effort ("You kept trying") rather than results
- Turn challenges into playful games

2) Attention & Self-Regulation

What this skill means at preschool age

This skill reflects a child's developing ability to stay engaged, settle their body, and manage emotions with adult support.

You may notice

- Child moves frequently between activities
- Finds waiting or sitting still challenging
- Shows big emotions when tired, hungry, or overstimulated

Why this matters

Preschool children are still learning self-regulation. Calm focus depends heavily on routines, movement, and emotional support from adults.

How it is best supported

- Keep activities short and engaging
- Offer movement breaks between tasks
- Maintain predictable daily routines

Learning Skills Check-Up

3) Working Memory

What this skill means at preschool age
This skill reflects how a child holds simple information in mind during everyday activities.

You may notice
- Child responds best to single, clear instructions
- May forget instructions when distracted or excited
- Learns routines better through repetition and actions

Why this matters
Memory skills at this age are closely linked to context, movement, and familiarity. Understanding grows through doing, not verbal instruction alone.

What you can do at home
- Give one instruction at a time
- Use actions, gestures, or songs
- Repeat instructions calmly when needed

4) Planning Skills (Executive Functions)

What this skill means at preschool age
This skill reflects how a child begins activities and moves toward completion with adult guidance.

You may notice
- Child needs reminders to start an activity
- Enjoys the process more than finishing
- Finds transitions between activities challenging

Why this matters
Planning, sequencing, and task completion are early executive skills that develop slowly. Preschoolers rely on adults to guide beginnings and endings.

What you can do at home
- Use simple start cues (“Let’s begin”)
- Help your child clean up together
- Allow unfinished play when appropriate

Learning Skills Check-Up

5) Posture & Body Management

What this skill means at preschool age
This skill reflects postural control and comfort during short seated activities.

You may notice
- Child shifts position often while sitting
- Finds long table activities tiring
- Prefers floor play or movement-based tasks

Why this matters
Body strength and stability are still developing. Movement is essential for building the foundation needed for brief seated tasks.

What you can do at home
- Encourage floor play and climbing activities
- Alternate sitting with movement
- Keep table activities brief and engaging

6) Locomotor and Movement Fluency

What this skill means at preschool age
This skill reflects a child's comfort and enjoyment in moving their body during play.

You may notice
- Child is still learning balance, jumping, and coordination
- May be cautious with new movement challenges
- Confidence improves with familiar play spaces

Why this matters
Movement experiences support not only physical development but also confidence, attention, and learning readiness.

What you can do at home
- Offer daily outdoor play
- Encourage running, jumping, and balancing
- Avoid comparing movement skills

7) Coordination & Bilateral Integration

What this skill means at preschool age
This skill reflects how a child coordinates both sides of the body (and brain) together during play and daily activities.

You may notice
- Child is learning to use one hand to hold and the other to work
- Tasks like buttons, zips, or scissors take extra time
- Frustration may appear during fine-motor play

Why this matters
Bilateral coordination develops gradually and improves with playful, hands-on experiences.

What you can do at home
- Play with blocks, beads, and puzzles
- Encourage dressing practice without rushing
- Allow extra time for careful, precise movement tasks

8) Object Control and Visual Tracking

What this skill means at preschool age
This skill reflects the growing coordination between what the child sees and how their hands manipulate objects.

You may notice
- Child is learning to pour, stack, catch, and draw
- Accuracy improves with practice, not instruction
- Enjoys hands-on, sensory-rich activities

Why this matters
Eye–hand coordination develops through play and exploration, enabling the eyes to guide hand movements for precise object manipulation and forming a foundation for later learning without needing formal teaching.

What you can do at home
- Include pouring, stacking, and ball play
- Encourage drawing without correction
- Let your child explore and make a mess
